

Krati Jadaun

Davenport, FL • (603) 438-6344 • kratijadaun@gmail.com • [LinkedIn](#)

SUMMARY

Data Analyst with 3+ years of experience turning complex, cross-functional datasets into actionable insights and automated reporting. Skilled in SQL, Python, Tableau, Power BI, and Snowflake, with a track record of building dashboards, forecasting models, and KPI frameworks that improve data visibility and decision-making. Experienced translating business questions into analytical frameworks across logistics, e-commerce, and CRM operations.

SKILLS

Data Analysis & Visualization: EDA, Time Series, Predictive Analytics, A/B Testing, Hypothesis Testing, Excel, Tableau, Power BI, VBA, Incorta

Databases & Querying: SQL, MySQL, MongoDB, Snowflake

Programming & Frameworks: Python (NumPy, Pandas, Matplotlib, Scikit-learn, PyTorch, TensorFlow, XGBoost), R, SAS

Modeling & Statistics: Supervised Learning, Classification, Clustering (K-means), Regression, Bayesian Optimization, Cross-Validation, Feature Engineering

Deployment & Tools: Git, Flask, Docker, Azure Cloud, Linux

Domain Experience: Logistics & Supply Chain (Extensiv WMS/OMS, Blue Yonder WMS), CRM & Product Analytics (SAP, Salesforce, KPI Frameworks, Funnel Analysis, Customer Segmentation)

Project & Workflow Management: Agile, Cross-functional Collaboration, Process Mapping, Requirements Gathering, JIRA

PROFESSIONAL EXPERIENCE

Business Systems Analyst II & Data Analyst

Jan 2025 – Present

RealCold, Lakeland, FL

- Automate Python/SQL data pipelines, reducing manual reporting time 20% and improving operational reporting accuracy across temperature-controlled sites
- Build throughput and inventory dashboards in Tableau and Power BI to analyze warehouse performance by customer, unit type, and site, improving labor allocation and pricing decisions
- Integrate an AI-enabled analytics layer to standardize data validation ahead of dashboard delivery, increasing data availability 30% and reporting accuracy 10%
- Translate business questions from 5+ cross-functional teams into logistics-aligned KPIs, presenting findings to 20+ stakeholders across operational leadership

Data Analyst

Jan 2025 – Mar 2025

Northeastern University, Boston, MA

- Delivered Tableau dashboards that surfaced inefficiencies across 100+ NAICS sectors, enabling leadership to drive resource and process improvements across units
- Conducted statistical analysis in Python to evaluate performance trends, enabling the pricing team to redefine high-margin segments and improve pricing 15–20%
- Led exploratory data analysis to uncover patterns in operational metrics, shaping roadmap decisions and improving regional performance planning ~18%
- Engineered SQL queries for cohort-based segmentation models, informing campaign strategies and increasing user engagement forecasting accuracy 25%

Data Scientist Intern

July 2024 – Nov 2024

Radical AI, New York, NY

- Built and deployed analytics workflows using scikit-learn and XGBoost, refining decision accuracy 15%+ and strengthening operations across core systems
- Reduced overfitting and improved model reliability 20% through Bayesian hyperparameter optimization and cross-validated tuning on production datasets
- Conducted A/B testing and causal inference modeling to quantify ML-driven system impact, identifying 10–18% performance lift across key user segments

Business Systems Analyst

Sep 2019 – Feb 2020

Grand Excelsior, Dubai

- Built Power BI dashboards unifying occupancy, turnaround, and satisfaction data for 5+ properties, cutting manual reporting time 40%
- Applied k-means clustering and cohort analysis to segment 50K+ guest profiles, informing engagement strategies that increased campaign effectiveness 11%
- Performed regression-based root-cause analysis on 10K+ service interactions, identifying key drivers behind a 13% increase in guest satisfaction, and integrated CRM, booking, and service log data into unified reporting pipelines, cutting reconciliation time 30%

PROJECTS

Logistics Performance Analysis Dashboard

Dec 2025 – Jan 2026

- Created a logistics analytics dashboard analyzing 15K+ shipments, 33M+ miles, delivery-time variance, and cutoff compliance to create a unified operational view
- Enabled leadership to identify 16% delay patterns, strengthen visibility into 83% on-time deliveries, and improve strategic decision-making across logistics operations

EDUCATION

Northeastern University, Boston, MA

July 2023 – Mar 2025

Master of Science in Analytics, GPA: 3.7/4.0

 Relevant Coursework: Big Data Systems, Predictive Analytics, Data Visualization, Data Warehousing & SQL, Business Intelligence
